Cisco® Unveils Nexus 7000 Series Data

The Nexus 7000 answers customer demands for next-generation mission-critical data centers, it is the flagship member of the Cisco Nexus Family, the first in a new data center class of switching products.

The Nexus 7000 is designed specifically for the data center with improved airflow, integrated cable management, and resilient platform architecture.

At the heart of the Nexus 7000 Series is the NX-OS software, purpose-built to maximize data center resiliency and to consolidate disparate networks.

The Nexus 7000 Series is the first platform to deliver Cisco Trusted Security, for more info visit:

Cisco® ACE 4710 Application Control Engine

The Cisco® ACE 4710 Appliance represents the next generation of application switches for maximizing the availability, acceleration, and security of data center applications.

The Cisco ACE 4710 Appliance allows enterprises to accomplish:

- Maximize application availability
- Accelerate application performance
- Secure data center and applications
- Facilitate data center consolidation through fewer servers, load balancers, and data center firewalls

The Cisco ACE 4710 achieves these goals through a broad set of intelligent Layer 4 load balancing and Layer 7 content switching technologies integrated with leading-edge acceleration and security capabilities. A primary design element of the Cisco ACE 4710 is its use of virtualized architecture and role-based administration to streamline and reduce the cost of operations involved in rolling out, scaling, accelerating, and protecting applications.

The Cisco ACE platform is designed to serve as a last line of defense for servers and applications in data centers. The Cisco ACE appliance performs deep packet inspection and blocks malicious attacks. An integrated firewall enables IT professionals to comprehensively secure high-value applications in the data center and facilitates consolidation in data center. For more information visit:

Mercury's Email Filtering Service

Premium Email Filtering is a cost effective alternative to in-house email filtering solutions. It is also a highly competitive replacement to any incumbent outsource service. Compared to internal solutions, Mercury Networks can save you 60% to 90% in email processing loads, reduce email bandwidth expenses, and lower the manpower resources currently tasked with email

filtering management, software configuration and maintenance. Mercury's Core Service Offerings:

- Free custom labeling
- Affordable outbound services
- Accurate Real Time Billing, or a monthly working agreement

Email is mission critical to all businesses, which is why all of our services ALWAYS INCLUDE EMERGENCY 24X7 SUPPORT. We're here to guarantee service to you -

so let Mercury Networks stop spam, viruses & inappropriate content from penetrating your network. Save time and financial resources. Be confident with our ironclad service guarantees and take charge of your acceptable corporate email usage policies through one source, managed by us, for you.

Mercury Networks can save you 60-90% in email processing loads and reduce bandwidth expenses.

Mercury's Network Monitoring Solutions

Mercury Networks now offers the valuable service of network monitoring to business customers.

Your business network can enjoy the same level of professional monitoring that most Internet Service Providers do, 24 hours a day, 7 days a week

Mercury understands the importance of uninterrupted Internet connectivity to your

business. To help maintain your Internet up-time, we have developed the *MNI Monitoring System*.

With multiple tools at our disposal, we will notify you immediately when crucial network components are inoperable.

Mercury's *MNI Monitoring System* will identify where your network may be weakening, thus assisting

you in eliminating possible traffic bottlenecks and outages before they occur

The *MNI Monitoring System* comes in two separate packages to meet the scale and needs of your business:

Mercury Offers Cisco SmartNet

Cisco's SmartNet Service is an award-winning technical support service that can give your IT staff direct, anytime access to Cisco engineers and Cisco.com resources to help ensure the fast, expert response and accountability they require

to resolve critical network issues. Cisco SmartNet services include around-the-clock, global access to the Cisco Technical Assistance Center (TAC) and access to the extensive Cisco.com knowledge base and tools, for easy

access to online technical information and service request management and much more.

TelePresence Offers World-Wide Connection

In today's business world, employees work from all different places: home, satellite offices, their cars, sometimes even vacation spots. Cisco's TelePresence offers employers a way for their employees to connect from all over the world.

TelePresence creates life-like and in-person experiences virtually, through high-quality audio and high-definition video. TelePresence's interactive elements deliver a virtual meeting experience unlike any other, over your network.

Cisco's unique network-based approach takes full advantage of Cisco's high quality IP network and unified communications expertise. The network delivers a TelePresence experience that is powerful, flexible, and easy to use. It's an approach that sets the stage for TelePresence to become an everyday business tool because:

- **Scheduling is easy.** You can schedule a Cisco TelePresence meeting with the enterprise groupware tools you use every day.
- **No IT support required.** No one has to come in early before a meeting to make sure it works. No one has to wait ten minutes to set it up. No one from IT has to remain there for the entire meeting.
- **Launching a meeting is as simple as making a phone call.** From the touch-screen of the meeting room's IP phone, users simply push a button to launch a call.
- **People look lifelike and life-size.** Cisco engineered its plasma monitors specifically so that remote participants are truly life-size. High-definition 1080p video delivers full motion video for a true in-person experience.
- **Controls are intuitive.** Because the interface is the phone, participants can take full advantage of unified communications capabilities such as hold, mute and conference during a TelePresence meeting.
- **Peripherals are plug and play.** The Auto Collaborate feature enables users to share information (files, documents, objects) with all locations simply by plugging in a laptop computer or document camera.
- **Integrate legacy video systems.** Cisco TelePresence was built on standards to support interoperability with traditional and emerging video technologies. You can use it with your existing installed systems today and know that it will also work with other high definition endpoints in the future.

TelePresence offers an alternative to costly travel.

"TelePresence creates life-like and in-person experiences virtually, through high-quality audio and high-definition video."

What Our Premier Certification Means to You

The world is changing and the network is becoming the platform for all communications, collaboration, and interactions. As a result, you demand intelligent, integrated network solutions to meet your business needs and we work hard to remain your trusted technology provider. Our Cisco® Premier Certified Partner status means that we have invested in and trained our team to achieve the Express Foundation Specialization. This enables us to deliver integrated network infrastructure solutions that will support key Cisco wireless LAN and security technologies.

We have also trained our people in Cisco's proven Lifecycle Services methodologies and processes for successfully delivering and supporting Cisco solutions. Along with our technology capabilities, this will help you thrive in today's competitive marketplace. As your trusted technology business advisor we can continue to help you:

- Accelerate your growth and profitability
- Gain and keep your competitive advantage
- Stay in front of the latest technology

Cisco Premier Certification gives us access to Cisco's world-class products and service programs, technical support, productivity tools, and training, all designed to help us continue as your trusted technology partner.

About Our Organization...

Ohio based **Mercury Networks, Inc.** is a Networking Solutions Provider that specializes in providing robust networking solutions that are functionally rich, cost-effective and simple to use. Our competitive advantages include our industry-leading intellectual property portfolio, distributor and customer relationships, and brand identity. Our solutions are ideal for ISP, Local Exchange Carrier, Cable, Education, Banking and SMB applications. As a Cisco Systems Partner we are committed to delivering high quality solutions built around Cisco's industry proven hardware.

Our service offering includes wireless network design and security, wireless bridging applications, network design and implementation for hotspots, MxU, hospitality and education markets. As a value added service we also offer network management and support.
